

rst2html + git == personal wiki

author: Armin Ronacher

This Makefile:

```
RSTOPTS=-time --link-stylesheet --stylesheet=style.css
SOURCES=$(wildcard *.rst)
HTML=$(foreach file,$(SOURCES),_build/$(basename $(file)).html)

all: html

_build/%.html: %.rst
    rst2html.py $(RSTOPTS) $^ &gt; $@

html: $(HTML)

clean:
    rm -f $(HTML)

plus plus make html in .git/post-{commit,update} + python and docutils + a stylesheet in _build (all paths relative to your repository) is the perfect cross platform wiki :-)
```

Notice: my blog kills the tabs, copy/paste from the pastebin
